CAMUL 2025-2026 – P2: Paper Writing Guidelines

1. Introduction

- Contextualize the MOOC on renewable energy and its relevance.

- Highlight the challenges identified in Project 1.

- Briefly present the technologies used (Matterport, multimedia tools).

1.1. Conceptual or Theoretical Framework

- Explain what a MOOC is and key pedagogical concepts (microlearning, self-paced learning).

- Include theories such as Constructivism or Cognitive Load Theory.

1.2. Related Research

- Summarize recent studies (last 5 years) on MOOCs, VR/Matterport, and multimedia in education.

- Connect these studies to your project.

1.3. Study Objective

- State the main research objective clearly.

- Provide 2–3 guiding research questions related to technology and pedagogy.

2. Method and Materials

- Describe the overall methodological approach (case study, design-based research).

2.1. Research Model

- Specify the research model and justify its use.

2.2. Methodology

- Explain how the project was executed, number of participants, and tasks.

2.3. Development

- Detail the development of the MOOC module, including multimedia creation and Matterport integration.

2.4. Data Collection Process

- Describe how data were collected (questionnaires, platform analytics, feedback).

2.5. Data Analysis

- Explain how qualitative and quantitative data were analysed.

3. Results

- Present findings with examples and simple charts if needed.

4. Discussion

- Interpret the results and relate them to previous research.

5. Conclusion

- Summarize key insights, contributions, and limitations.

6. Future Work

- List improvements and directions for MOOC expansion.

References

- Include 13–20 references from 2020 onward.

- Use credible sources (IEEE, Springer, Elsevier, MDPI, ACM).
