Multimedia and Learning

Multimedia and Learning

- "Great excitement came from realizing that the Internet—and more specifically, the World Wide Web—had the power to completely transform teaching, training, learning, and performance support practices. Excitement about the possibilities caused eLearning's proponents to over-promise on what they believed eLearning offered to the education, training, and performance support industries. Not surprisingly, eLearning underdelivered on virtually all of its many promises." Ellen Wagner

Multimedia and Learning

- Course based e-learning
- Learning Management Systems
  - "A learning management system (LMS) is a software application or Web-based technology used to plan, implement, and assess a specific learning process. Typically, a learning management system provides an instructor with a way to create and deliver content, monitor student participation, and assess student performance. A learning management system may also provide students with the ability to use interactive features such as threaded discussions, video conferencing, and discussion forums. "
- WebCT, Lotus LearningSpace, WBT TopClass, Intralearn, Claroline

Multimedia and Learning

- Learning Objects
  - "This is the fundamental idea behind learning objects: instructional designers can build small (relative to the size of an entire course) instructional components that can be reused a number of times in different learning contexts. Additionally, learning objects are generally understood to be digital entities deliverable over the Internet, meaning that any number of people can access and use them simultaneously (as opposed to traditional instructional media, such as an overhead or video tape, which can only exist in one place at a time). Moreover, those who incorporate learning objects can collaborate on and benefit immediately from new versions." David Wiley

Multimedia and Learning

- E-Learning Standards
  - IEEE, IMS, SCORM
  - Focus on Learning Objects
- Collaboration/Construtivist Learning Management Systems
  - "The stated philosophy of Moodle includes a constructivist and social constructionist approach to education, emphasising that learners (and not just teachers) can contribute to the educational experience in many ways." Martin Dougiamas
  - "As far pedagogy is concerned, the possibilities will range from documents delivering to problem and project based learning with a special attention paid to collaborative eLearning." Marcel Lebrun

Multimedia and Learning

- The term "e-learning 2.0" defines a new way of learning, related to the set of tools that Web 2.0 is bringing and that supports a social connective approach to learning. Stephen Downes

Multimedia and Learning

- Web 2.0
  - "Web 2.0 is the network as platform, spanning all connected devices; Web 2.0 applications [are] delivering software as a continually-updated service that gets better the more people use it, consuming and remixing data from multiple sources, including individual users, while providing their own data and services in a form that allows remixing by others, creating network effects through an "architecture of participation," and going beyond the page metaphor of Web 1.0 to deliver rich user experiences." Tim O'Reilly
  - Read-Write Web
- Open content and tools

Multimedia and Learning

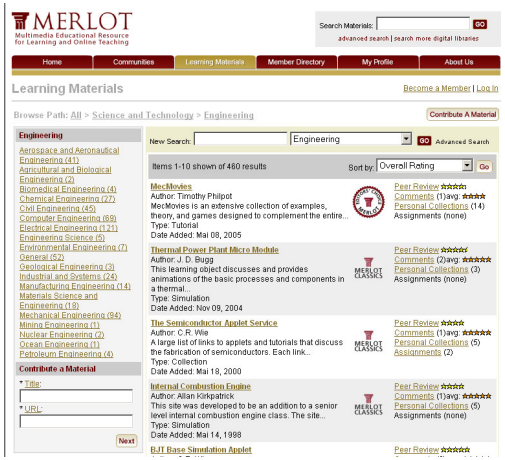

- Net-generation - Millenials
  - Absorb information quickly (small chunks)
  - Visually oriented
  - Multitasking
- Connectivism
- Social networking
- Undesigned learning

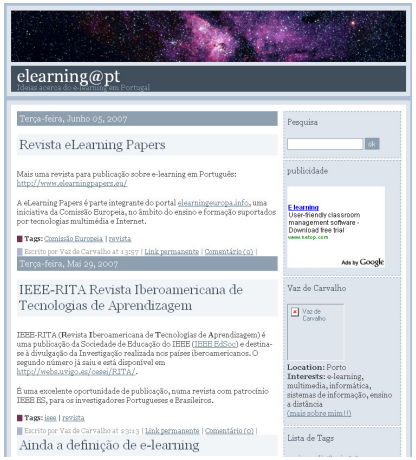

Multimedia and Learning

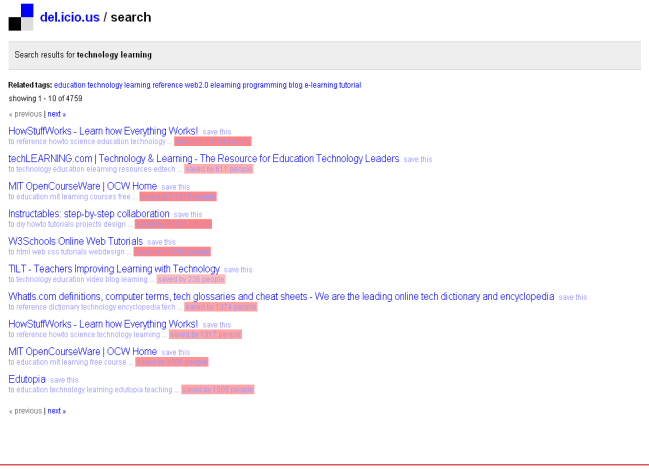

- Social networking tools
- Desktop video/audio conferencing
- Folksonomies
- Blogs
- Wikis
- Podcasting
- E-Portfolio
- Mobile Learning
- Virtual Worlds
- Adaptive Educational Systems
- Semantic Learning Technologies
- Pedagogical Patterns and Learning Design

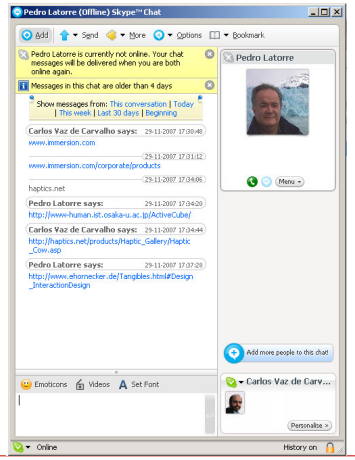

Multimedia and Learning

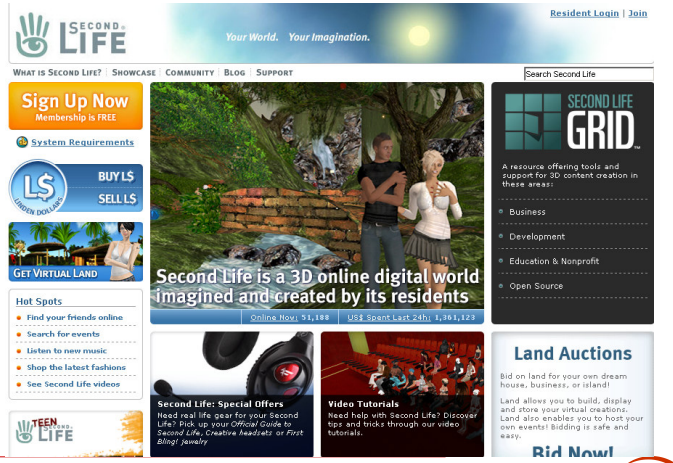

Multimedia and Learning

- Social network tools
  - LinkedIn, Orkut, Yahoo 360
  - "Business networking tool. It operates on a modified version of the "six degrees of separation" theory. This theory proposes that anyone on the planet can be connected to any other person on the planet through a chain of acquaintances that has no more than five intermediaries." John Parker

Multimedia and Learning

- del.icio.us and Flickr,
  - "Folksonomy" (in contrast to taxonomy), a style of collaborative categorization of sites using freely chosen keywords, often referred to as tags. Tagging allows for the kind of multiple, overlapping associations that the brain itself uses, rather than rigid categories.", Tim O'Reilly

Multimedia and Learning

- Social network tools
  - Blogs
    - A blog (short for weblog) is a personal online journal that is frequently updated and intended for general public consumption.
  - Wikis
    - A wiki is a type of Web site that allows the visitors themselves to easily add, remove, edit or change the site content.

Multimedia and Learning

- Podcasting
  - Digital recording of a radio broadcast or personal programme, made available on the Internet for downloading to a personal audio player
- E-Portfolio
  - A selection of "products" of individual learning, reflections or interpretations on those products. It may include representations of relationships between the products and reflections.

Multimedia and Learning

- Communities of Practice
  - "distributed groups of people who share a common concern, problem, mandate, or sense of purpose. They can be used to facilitate the informal knowledge transfer that drives leadership development, productivity, and innovation. […] CoPs build on existing formal content tools such as portals, learning management systems, document management, content management, and knowledge management, as well as team and productivity tools. They enable organizations to add a new dimension-the informal organization." Eric Sauve

Multimedia and Learning

- Adaptive Educational Systems
  - Adaptive learning system aims to provide adaptive learning materials to learners according to their aptitudes.
- Semantic Learning Objects
  - Domain ontologies, LO's structure, cognitive activities

Multimedia and Learning

- Pedagogical Patterns
  - "Pedagogical patterns try to capture expert knowledge of the practice of teaching and learning. The intent is to capture the essence of the practice in a compact form that can be easily communicated to those who need the knowledge.", Pedagogical Patterns Project
- Learning Design
  - "Specification languages to support specification supports the use of a wide range of pedagogies in online learning.", IMS

Multimedia and Learning

- Mobile Learning
  - Learning with portable devices
- Virtual Worlds
  - "Virtual reality connects directly with the mind. There is something very human about visual interfaces. I almost think of text-based interfaces, including browsers, as 'narrowband' into our brains, whereas visual interfaces are 'broadband' into our brains. For sure, learning and training will be one of the major killer apps.", Irving Wladawsky-Berger, IBM
  - "[…] understands the potential of Second Life and other virtual worlds as environments that allow unique forms of experimentation and exploration of new and innovative learning experiences.", Lucy Carter, Apple
