The Dev Team

About us

We are a group of Masters' degree students from ISEP that came together, in order to develop this particular university project.

Mission

Our mission is to provide assistance to individuals in terms of navigation in a particular institution, however a good focus of this assistance is towards individuals who have reduced mobility and/or have disabilities.

Vision

Our vision is to become the leaders in technologies that provide adequate accessibility to those you have variant degrees of disabilities and/or other medical issues.

Values

Design – User friendly interfaces.

Accessibility – Access and ease of use for people with disabilities.

Learning – Acquiring knowledge from various sources to improve ourselves.

General Resources

I. Human Resources

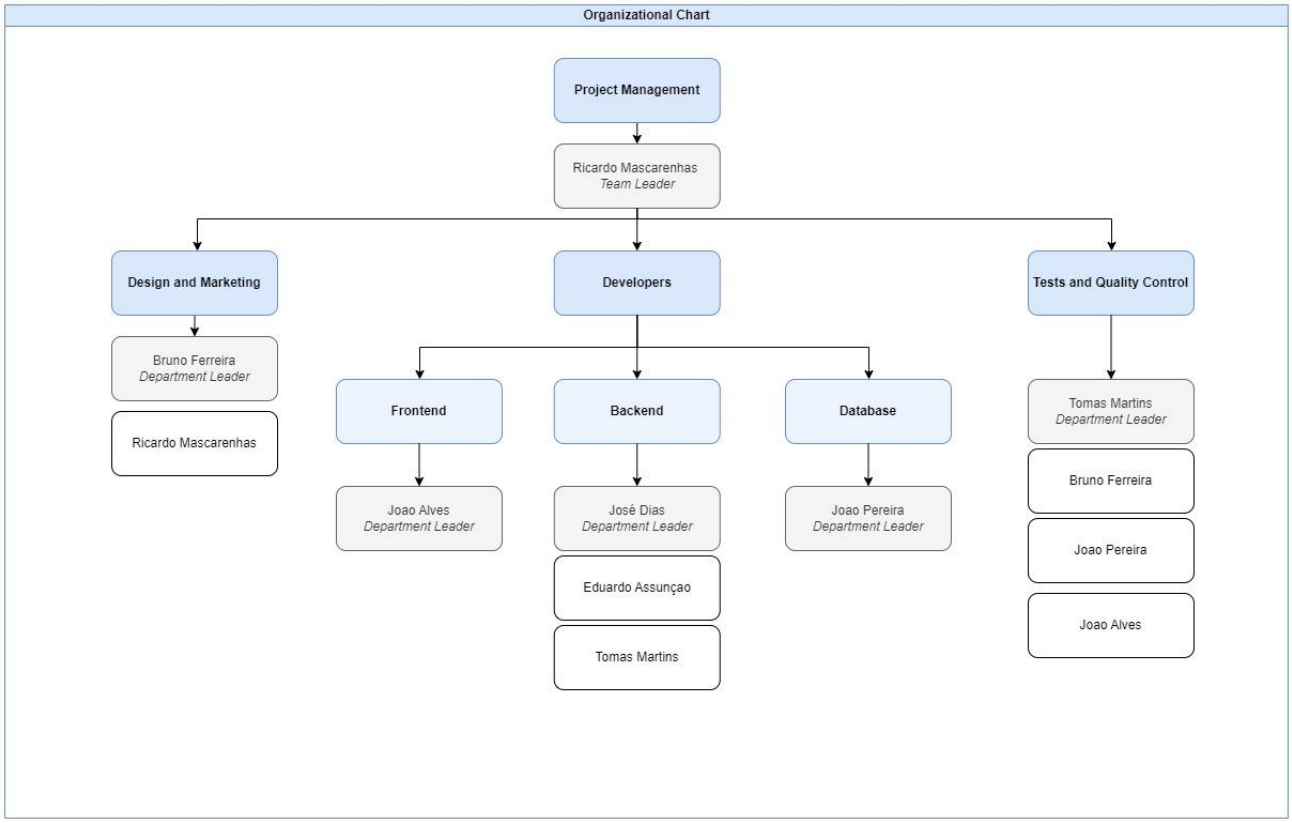

Figure 1 - Organizational chart

II. Technological

The technologies used in the development of the ISEP Indoor Mapping are the following:

- Azure SQL Database
- C#
- Angular
- Ionic
- Figma

III. Financials

Due to the academic nature of the project, the only expenditure associated with it is time. All the team members have no income awarded for the development of the project.

Analyze Surrounding Environment

Clients

The future clients of our project will be any visitor of the ISEP campus. These future clients will use the ISEP Indoor Mapping application to navigate through the campus and reach their destination without having any previous knowledge of the institution. These clients are possibly new students of ISEP that need help to reach their designated department or classroom, or professors, that are not part of the institution, that have been invited to give a lecture and need to go to a specific auditorium.

One other functionality that the application will provide clients is the visualization of 360º videos of the auditoriums and classrooms, for the users to know the look of their destination beforehand.

However, as stated previously our focus is also on accessibility. We are well aware that our future clients are also individuals who have reduced mobility and/or disabilities. Taking this into account, our application will have to provide the shortest and most accessible path for these individuals, regardless of the entrance used.

Direct Competitors

At this moment our sole competitor is another group of students of the same institution that are developing a similar project.

Indirect Competitors

Applications such as Google Maps maybe pose a threat to our efforts since it provides the possibility to use indoor maps in specific locations, such as museums. In other words, there is a possibility that this same functionality may be provided to educational institutions.

Situation in the Long Term

Non-Financial

- Be recognized as the best indoor mapping app for educational institutions.
- Improve accessibility to those with disabilities.
- Improve the educational institutions' campus.

Financial Objectives

- Achieve financial backing from the home and/or other educational institutions.

Marketing Mix of the Company: 7 P's Marketing for Services

1. Product

The product offered is the application of the indoor mapping, in this case specifically for the ISEP campus, that will use beacons in order to properly execute its functionalities.

2. Price

The application will be available for free.

3. Place

The application will be provided through the Google Play Store.

4. Promotion

The promotion of the application will be inside ISEP, via their website and social media.

5. People

The distribution of the product is online and due to that fact the contact is also done virtually.

6. Physical Evidences

Due to the digital nature of the project, our physical evidence is going to be our design and the branding of the app. The branding of the app must be executed through various promotion tools and the app itself has to have a logo and a consistent design.

7. Processes

In order for the customer feel close to the development team, the mobile diary tool will be used. In this app the users can insert their feedback and other aspects. It is important for our team to evaluate not only the feedback provided, but other aspects like ideas or concepts, so we can improve our user experience.

SWOT

- **Strengths:**
    - Accessibility for individuals with motor issues and disabilities.
- **Weaknesses**
    - Fluctuating usage of the product.
    - Low motivation from regular users to use the product.

- **Opportunities**
    - The project can be adapted to other educational institutions.

- **Threats**
    - Apps that already exist that provide indoor mapping.

General Strategies

Product Life Cycle

An expected product life cycle (Figure 2) tends to have a sharp climb on the growth period, usually peaks on its maturity a slowly, but surely declines until the product is not used anymore. However, to try to prevent this decline, that has ties with the market and other apps that are our competitors, we will used the provided feedback from our users to update the product and hopefully prevent its decline.

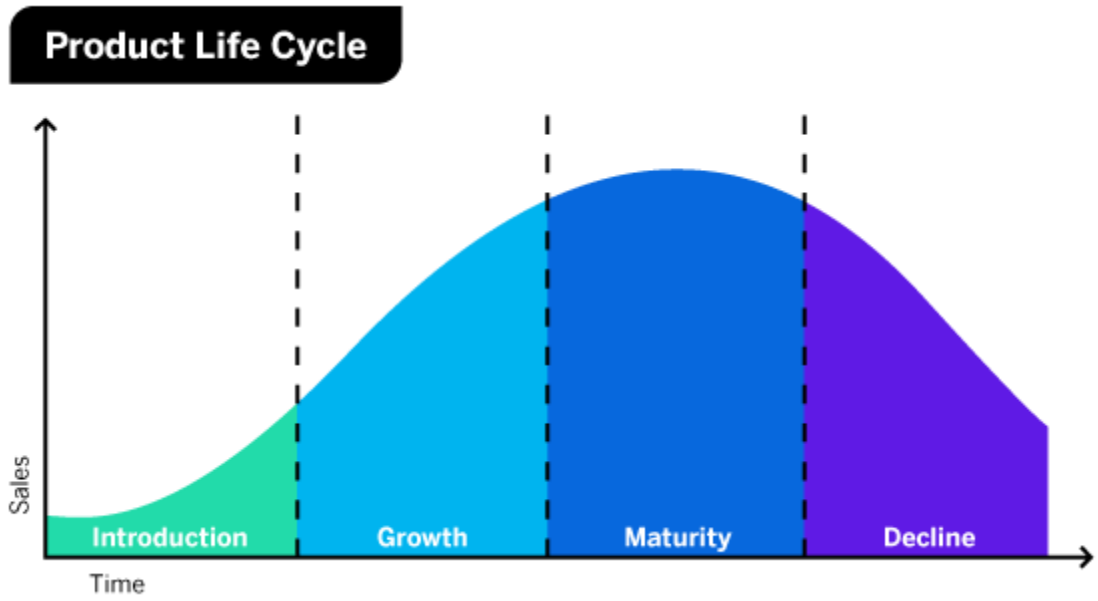

Figure 2 - Normal product life cycle

BCG Matrix

The Boston Consulting Group (BCG) Matrix is a method of analyzing the life cycle of a product, manage marks, making strategic planning and up to perform a sales strategy. The method is quite comprehensive and is used as a marketing strategy, as it helps to melt through a simple graphic market share or growth rate of any product or service market.

Each of the four quadrants in the following figure (Figure 3), represent a specific combination of relative market share, and growth.

Figure 3 - GCG Matrix

- **Stars:** Products with high market share referring to are represented, as well as high sales growth. These products can be profitable but maintains flow in the box since the profit often need to be reincorporated to kill the turnover of the product.

- **Cow:** Products or services that have a high rate of growth and sales, but a stake in the still low market. much investment may need to become cash generators in cash and products or Star. Are products that need action to improve their share in the market.

- **Question Mark:** Products or services that have a high rate of growth and sales, but a stake in the still low market. much investment may need to become cash generators in cash and products or Star. Are products that need action to improve their share in the market.

- **Pets:** Products or services that have low relative market share and lower sales growth rate. Usually do not provide cash, as they have generally high cost and volume of lower sales.

Action Plans

Product	• **Application**
Price	• Free

4 months Schedule

Action	26 March	22 April	22 May	22 June
APP	X	X	X	
Social Media Post ISEP Website				X
Google Play				X
Pitch Presentation			X	

Factors – Key of Success

The first success factor is that the application provides the shortest and most accessible path towards a specific location, in this case a specific auditorium.

The app's success also depends in providing a good user experience, in conjunction with some accessibility options and the future uses of this product need to be reliable independently of the educational institution it is being used in.
